Brand New Book ***** Print on Demand *****.Excerpt from Soils of the Eastern United States and Their Setts XXII: The Norfolk Sandy Loam Where erosion has been excessive the entire soil mass has been carried away and galled spots occupied by stiff red clay are found within the fields. These constitute local areas of the Cecil clay and where broadly developed are mapped as such. Every gradation between the galled areas, where only subsoil material exists, and the full development of the typical Cecil sandy loam may be found in any of the surveyed areas. Advantage should be taken of this difference in depth of the surface soil in the selection of the appropriate crop for each particular area of the type. Scattered through both the surface soil and subsoil material there will be found greater or less quantities of angular white quartz, or white flint, as it is locally known. These masses are the remains of old veins and scams of quartz which intersected the original granite or gneiss rock. The Cecil sandy loam contrasts sharply with the Cecil clay, which is the...
