We shall now give By the term arc we shall irt general imply an arc of a gnat circle. Q some which include the magnitude of lines, and belong to the class which he calls metrical. 1. If from the angles of a spherical triangle three arcs be drawn meeting in a point, and cutting the opposite sides, the products of the sines of the alternate segments of the sides are equal. Take the projection of the spherical figure on any plane, and we shall have a plane triangle with three right lines drawn from its angles meeting in a point, and therefore (Art. 9, Lemma 1) the products of the alternate segments of the sides are equalWe have, then, an equation of the kind mentioned in Article 110, the number k being in the present instance 1. The Proposition is evident, therefore, from the second part of that Article. A direct proof of this Proposition will be found in Art. 125. 2. If a great circle cut the three sides of a spherical triangle, the products of the sines of the alternate segments of the sides are equal. This follows from Art. 9, Lemma 2, by Art. 110, just as before. This Proposition also is proved directly in Art. 125. 3. Let PQRS be a parallelogram, and OM, LN parallel to the...
